

Electrical Services Division

Fathom Systems have an established track record of providing turnkey systems and equipment to Clients across the Commercial Diving, ROV and Subsea sectors. This work includes the supply, installation and commissioning of electrical control gear, control panels, automation systems and interface cabling designed and approved for the marine environment.

Recent expansion of the Company has allowed us to establish an Electrical Services Division that will offer a variety of electrical and automation products and services to our Clients for applications onboard vessels, on offshore installations and at onshore facilities.

The Electrical Services Division will be fully supported by the Fathom engineering, logistics and project management teams to provide an integrated solution.
